

What is claimed is:

1. A USB plug and memory card combination having an integrally formed housing, comprising:

5

an insert of USB plug, on which four terminals are mounted to extend from a top front to a rear end of said insert;

10

a memory card consisting of a circuit board, and a memory and a control IC mounted on said circuit board, said circuit board being electrically connected to rear ends of said four terminals on said insert of USB plug by way of soldering; and

15

an integrally formed overall metal housing adapted to completely enclose both said insert of USB plug and said memory card therein.

20

2. The USB plug and memory card combination having an integrally formed housing as claimed in claim 1, wherein said metal housing is provided on a side wall at a predetermined position with a card-ejecting notch.
